**Introduction.** Education as a process is one of the most important types of intellectual work. The topical problem is to increase the efficacy of pedagogical process, to train professional and cultural oriented individuality of interns who have world outlook, ability to intellectual and specialized creativity. New requirements which are determined by introduction of our country to European and World space and reforming of Medical education system and new requirements put difficult tasks before instructors during practical training of future specialists. It assists in the role of pedagogical excellence and his/her abilities to manage correctly pedagogical process during intern's training as highly-qualified experts.

**Main part.** It is important not only to convey information, but also add cases from medical practice of interns in order to make educational process more effective one. Nowadays, one has an experience of practical trainings in two children's infectious departments which are situated in town and in the Department of Resuscitation and Intensive Therapy of Poltava Regional Clinical Infectious Hospital. Improvement of practical training is important task during education. Nowadays, when society, mass media criticizes medicine and also its practical importance, when such points as medicine belief, children's vaccination, decrease of doctor's profession, interrelation between patients and physicians and colleagues are prone to the discussion, that's why strict requirements are before future doctors. Firstly, test method of the control of the knowledge of interns, development of 15 minute films which are for work with audience are important and effective among practical experience. These methods are effective in practical training of young doctors. Secondly, multimedia is informative and effective means that assists in numerous information submissions. The most important aspect of modern system of education is its individualization. Interns should know the purpose, educational aims and results, and understand how it should be achieved. It should be established that e-learning is one of the most productive way of internet-technologies. Concilium

should be considered as one of the methods where doctors-interns give their opinions or they present their prepared lecture on different topics of Pediatrics.

Years of acquirement future profession is the age period when the role model for young people of then is immediate entourage like parents, teachers, people who have reached certain heights in any field, especially in professional work and mastery of foreign languages. Biographies of famous Ukrainians, scientists, physicians appropriate use in the context of interdepartmental coordination of training and educational work. Technological methods of prompting stories of prominent experts lead to the immediate concrete actions that led people to succeed. They are often the object of immediate implementation of the learning process as evidence of using the positive experiences of famous people.

**Conclusions:** The use of new organizational forms of education and modern educational technologies in traditional postgraduate education of future specialists assists in motivation promotion of interns to achieve professional development. It also gives an opportunity to achieve practical training of interns that is concerned with practical direction according to requirements of labour market.
